FRESH START[®]

Calf Milk Replacers

FRESH START[®] Calf Milk Replacers are carefully formulated to meet calf requirements:

High quality milk protein ingredients to maximise digestibility and performance.

A balanced amino acid profile (the building blocks that make up protein) to optimise growth and development.

Yeast to support optimal gastrointestinal development and functionality.

FRESH START® ELITE

The preweaning phase of a calf's life provides a huge opportunity to optimise the lifetime performance of the calf.

High growth rates in the preweaning period have been shown to demonstrate clear long-term benefits on future fertility, lactation and performance.

FRESH START® ELITE supports digestive health and encourages rumen development which will maximise early growth in beef and dairy calves.

Crude Protein %	22
Fat %	18

-  Contains skim.
-  Optimal level of nutrients to support good starter intake to promote early rumen development.
-  Contains **PRO-ZEST®** which is a blend of fatty acids designed to support calf health and performance.
-  Egg protein; natural antibodies to support the immune system, and aid gut health and development.
-  Promotes a healthy gut flora.
-  For use where your target daily liveweight gain is 750g - 850g.
-  Specific blend of essential fatty acids supporting immune function and digestive health.
-  Excellent solubility and stability for easy mixing and consistent feeding.

In addition to milk replacer, always ensure calves have ad libitum access to water from birth and dry feed and roughage after the colostrum phase from day 3 onwards.

See bag for mixing and feeding recommendations.
